## A COMPLETELY AUTOMATIC BUILT-IN COFFEE MACHINE

built-in coffee machine Gorenje is distinguished by superior performance. The modern shape of this machine features clean lines, enhanced by the sleek stainless steel appearance that blends in well with all contemporary kitchen trends. Intelligent advanced technological solutions enable simple and comfortable operation of the machine through buttons and an LCD display. The descriptions of the functions appearing on the display are available in eight different languages. While the machine provides a variety of coffee brewing methods among which you can select the flavour of your choice, it can also serve hot water only for making tea. Owing to the advanced integrated functions the maintenance of the machine is extraordinarily simple. The possibility of setting the automatic switch-on time and having the machine ready for you in the morning offers even greater convenience of use. The functionality of the machine is further upgraded by a warming drawer, available separately. The drawer is installed right under the coffee machine, the entire composition fitting perfectly into the furniture element designed for built-in ovens. The drawer is used for warming dishware, but also food. With it you will be able to serve fresh coffee in suitably warmed cups.

## AUTOCAPPUCCINO

is a unique function for the preparation of excellent Italian coffee with one single touch. The control panel, on which all the available functions are clearly displayed, features a special button that enables the brewing of a cappuccino preserving all its superior characteristics. The machine forces through the coffee the amount of water needed to extract from the coffee its essential fragrance, thus preserving its authentic taste. Through the integrated slider you can also regulate the frothiness of the milk and thus savour a creamy cappuccino or coffee with milk. Pleasure guaranteed at the press of a button.

## A PALETTE OF COFFEE FLAVOURS

is an advantage of the Gorenje coffee machine. Just choose whole bean or ground coffee and leave it to the machine to prepare the beverage. The combination of an automatically set amount of scooped coffee and the possibility of manually adjusting the fineness of the grind enables the machine to serve five types of coffee, characterised by different textures and aromas: extra mild, mild, medium, strong and extra strong. In addition, you can also choose between single, medium and double shots of espresso coffee. By selecting the preparation of two cups of coffee at a time you can enjoy an excellent coffee with company!

## SETTING YOUR OWN COFFEE MAKING PROGRAMME

tailored to an individual taste. Modern technology offers a simple way to set your own coffee making programme. The amount of coffee set after your own wishes will thus be available to you at a mere touch of a button. You can choose your favourite flavour from the selection of coffee tastes available before each brewing and enter the quantity of coffee in the machine's memory, thus saving your own programme for preparing coffee. You can also alter the flavour of the beverage during the very coffee making.

## THE RIGHT DOSE OF FRESHLY GROUND BEANS

is the basis for an excellent coffee. With the Gorenje coffee machine you can adjust the fineness of grind for your coffee beans, choosing from no less than 9 levels of fineness. Grinding the beans just before making coffee preserves its aroma to perfection. But you can also use previously ground coffee, of course. If you choose this option, you can set the dose for each individual cup, while coffee in beans is dosed automatically by the machine. The coffee storing container is very easily accessible, as the machine can be pulled from the furniture element by means of telescopic guides. Coffee grounds are collected in a special container in the form of compact tablets. When the container is full or when the coffee bean container is empty, a warning appears on the display.

## THE CAPPUCINO MILK CONTAINER

is extraordinarily large, to allow simultaneous preparation of several cups of cappuccino - without having to add milk each time. But there is more! The milk container can easily be removed and stored in the refrigerator till next time you want to use it.

## A U T O M A T I C R E G U L A R C L E A N I N G

is one of the most important advantages of the Gorenje coffee machine. After brewing coffee you can activate the cleaning function by simply pressing the "CLEAN" button for a few seconds, thus guaranteeing antibacterial treatment both of the milk dispenser as well as of the inner suction tubes. Since the machine performs an automatic washing cycle at every switch-on and shut-off, washing away any coffee residues from the dispensing nozzles, no additional cleaning is necessary nor is there danger of the nozzles clogging. However, due to various degrees of water hardness, it is recommended that after some time the machine is descaled - after a certain number of beverages prepared the machine will display such a warning. The descaling programme can be activated by simply pressing the respective button. All removable parts of the coffee machine are dishwasher safe. On the bottom of the machine there is also an excess water reservoir, which must be emptied every time the red float device becomes visible.
