A Great Eagle Trading Holdings Company

Gorenje Group is one of **the five largest household appliances manufacturers** in Europe. It has been supplying technologically perfected, superiorly designed, energy-efficient home appliances to users in seventy countries around the globe, improving the quality of their living for more than 60 years.

Gorenje is constantly raising the bar of quality standards and consumer expectations. Being one of the leading manufacturers, Gorenje's quality and reputation are witnessed by numerous prestigious international awards including the Red Dot Design Award, Plus X Award™, Grüner Stecker Prize, Get Connected Product of the Year Award, Product Innovation Award, Trusted Brand, Superbrands, to name but a few.

EXPERIENCE FROM THE PAST

For the past 60 years, Gorenje has been a brand of excellence that consistently produces domestic appliances of the highest quality. Followed by the first patent awarded in 1956, Gorenje has over 150 patents and numerous innovation awards to this day, a fully successful 60 years later.

SOLUTIONS OF TODAY

A VISION FOR THE FUTURE

CREATIVE SOLUTIONS OF TODAY

Intelligent use of modern technology

Innovation pushes the limits. But its true value goes further than that: it lies in balancing the expectations of the users and the possibilities of modern technology. Excellence is witnessed by advanced, solidly built and reliable products whose efficiency will convince even those with the strictest standards. Innovation is a way of our thinking and the fundamental guideline in development of high-quality and durable products.

INNOVATION

DESIGN

Appealing form and ergonomics for individual lifestyles

The essence of good design is total understanding of the form, which ennobles the products fundamental use value. We devote particular attention to comfort and safety while paying due respect to the aesthetic sense of each individual. Superior quality of genuine materials, ergonomics, and aesthetic harmony reach beyond anything known in the past as they are fused into original design solutions of today.

SIMPLICITY

Comfort of use
for better quality of life

Understanding of the users' needs for a quality way of living is the central guiding principle of development. Convenient solutions exceed the basic expectations with remarkably simple choice of the best suited programmes and settings. The shortest possible route to desired result is guaranteed, without constraining the possibilities of choice or requiring any effort. Ours is a quest for affordable convenient solutions that make life simpler.

ECOLOGY

Respect the Nature

Quality of living goes hand-in-hand with environmental care. This compels our use of environmentally friendly technology and manufacturing processes. The production process includes increasing the use of more recyclable materials and components. Products excel with functions that provide considerable savings in power or water throughout their useful life. Together, we are preserving the environment for the generations to come.

The Red Line

THE COMFORT OF BEAUTY
THE BEAUTY OF TECHNOLOGY

DESIGN IS BOTH

We believe that quality and functionality can afford to be noticed, and that design should attract, it should stand out and inspire. In collaboration with international designers, we have managed to combine what was once incompatible: pleasant to behold, easy to use and affordable in price.

Open to new ideas, we use the latest technology to transform everyday household items into desirable objects of beauty that are also environmentally efficient. Dedicated to being user-friendly, we understand people needs. Committed to superb, yet accessible design, we aim to create new perspectives in the art of living.

Our state of the art technology is effortless and sets no limits, it inspires a new open-minded approach to home living.

Gorenje fridge for iPod

THE ENVIRONMENT IS THE FOUNDATION OF OUR FUTURE. WE PRESERVE IT.

Today, about 40 percent of CO2 emissions are generated by households. An old appliance can consume two or three times more resources than the latest models. The purchase of the best energy rated appliance is a worthy long-term investment that will save your money and the environment.

By changing the way we live, taking an interest in sustainable living and introducing new energy and water efficient appliances into our homes, would not only provide substantial household savings, but would contribute to reduce the pressure on our planet's resources.

Today, our quality of living is closely related to the care of the environment. While complying with the most stringent environmental protection standards (ISO14001 and EMAS), Gorenje is developing environment-friendly technologies and processes that have the least impact to the planet. By offering products made of environment-friendly materials and by including of functions that deliver considerable power and water savings throughout that appliance's useful life, we join you in common efforts to preserve the environment for the generation to come.

THE PLANET IS OUR HOME

OUR FUTURE DEPENDS ON THE ENVIRONMENT

Investing in environment-friendly technologies – even more than required by the legislation – is a token of responsibility both to our environment and to the generations to come. With regard to environment protection, Gorenje is at the top of European industry in terms of both appliances development and technological procedure management.

WE ARE A PART OF THE SOLUTION

We are a Member to Save the Earth

President of Gorenje, Mr. Franjo Bobinac is the Steering Committee of the European Committee of the Domestic Equipment Manufacturers (Conseil Européen de la Construction d'appareils Domestiques - CECED).

The Steering Committee acts as supreme body of the CECED as it draws up guidelines for CECED's activities.

CECED represents the household appliance manufacturing industry in Europe. Its main objective is to strive for improvement of performance of household appliances with reduced environmental impact. The Association acts as a partner in dialogue with the EU's political and regulatory institutions that prepare and pass acts which are binding for EU members. Gorenje is a member of CECED since 1998.

Clean Approaches, Environmentally Friendly Production

The approach of introducing clean, environmentally friendly technologies has been growing together with Gorenje since the beginning. Particularly since 1985 it has not been possible to apply any technology without consent by the department of environmental protection.

Gorenje abolished dangerous and polluting procedures substantially earlier than required. We have our own plastics and polystyrene plants where all waste material is returned to production processes. All technological enameling procedures and surface treatment of metals are ecologically the best. At certain points we even exceed statutory and environmental requirements and achieve significant results in reducing negative impacts on the environment.

Up-to-Date Solutions, Environmentally Friendly Production

GENERAL

- Environmentally friendly powder varnishing was introduced into the production of cooking appliances in 1998.
- All Gorenje appliances are made of materials which can be recycled to more than 95%.

OVEN

- Nearly all Gorenje ovens fall into energy class A+.
- EcoClean enamel retains heat and thus consumes less energy.
- Aqua Clean function lets you to clean your oven with water only and in low temperature.

INDUCTION HOB

- With using Gorenje ExtremePower induction hob, cooking time is 1/3 less than cooking by gas hob and save up to 50% energy.
- Our glass-ceramic hobs are equipped with several-level regulation of temperature.

REFRIGERATORS

- In 1993, Gorenje was the first one in Europe to reduce and then to abolish the use of ecologically unfriendly cooling and push agents which warm the environment and destroy ozone.
- In 2000, environmentally friendly powder varnishing was introduced into the production of refrigerators.

- Thicker insulation and energy saving components were introduced and we have managed to halve electricity consumption.
- All Gorenje refrigerators have received A+ or A rating for energy performance, which can bring you energy savings of up to 25%.

DISHWASHERS

- Gorenje dishwashers with A rating for energy efficiency, consumes only 12 liters of water per washing cycle, while 80 liters of water would be required for washing up the same quantity of dishes by hand. Water saved per week is equivalent for a full bath.
- On average class A dishwashers consume only 0.5 kWh of electricity per washing-up cycle.

LIFE AFTER LIFE, RECYCLING OF HOUSEHOLD APPLIANCES

Already upon the birth of the product we were aware that one day it will stop working. Therefore all products are made in the way which allows for easy disassembling and recycling in their last stage of life. As few variants of the same material as possible are built into the product, so that the need for separating in recycle procedure is limited. We have planned as few different types of joints as possible, which allows for easy disassembling in the recycle centre. Products are made of materials and components which may be recycled to at least 95%.

All plastic parts are marked, which allows for easy separation of different types of plastics. By recycling of materials, the emission of waste is reduced, and at the same time we save a lot indirectly. The production of basic materials, such as metal, requires a lot of energy and thus results in emission into the air and in the ground. Recycling procedures resulted in decreasing consumption of natural resources, waste parts, made of plastics and metals, may be returned to different production processes.

MILESTONES ON OUR WAY

- 1975 The first waste water treatment plant was built in Gorenje.
- 1985 An independent Gorenje department for environmental safety was founded in Gorenje, called Ecology, since then all technology has been developed in respect to the environment.
- 1987 The use of petroleum was completely replaced by natural gas.
- 1993 Gorenje was among **the first** in Europe to reduce and then to abolish the use of ecologically unfriendly cooling and push agents in the production of refrigerators.
- 1994 Gorenje abolished the procedure of cyanide galvanisation on voluntary basis, even before the latter was regulated by law.
- 1998 - 2000 Powder varnishing in production replaced liquid-based varnishing.
- 1998 Gorenje joined CECED (European Committee of Domestic Equipment Manufacturers), that is an organization, which represents interests of European domestic equipment manufacturers.
- 1999 Launch of energy class A products.
- 2003 Gorenje started to implement the requirements of WEEE Directive – European Directive on waste electrical and electronic equipment (2002/96/ES) – waste electrical and electronic equipment which makes manufacturers of electrical and electronic equipment responsible for products after the end of their useful life, and RoHS Directive - Restriction on the Use of Certain Hazardous Substances in Electrical and Electronic Equipment.
- 2004 Own polystyrene plant.
- 2006 Production of appliances which comply with RoHS Directive.
- 2008 Opened the first Zero Carbon House in France (teamed up with UK's Zero Energy Development Factory – ZED Factory).
- 2009 Own largest hazardous waste treatment plant in Slovenia, invested amount EUR6.8 million.
- 2010 Opened a production line for producing solid fuel from non-hazardous waste.
- 2010 Own solar plant, invested amount EUR585,000.

THE TOUCH OF LIGHT

A fusion of minimalism and colour, pure and bold, function and interactive.

A contemporary collection, distinctive for dynamic design, rounded lines and high-quality aluminium finish. Innovative design and cutting-edge technology leave an impression of colourfulness and versatility. Responding to a gentle touch, MoodLite technology will colour your world in one of the seven hues.

DESIGNED BY

Karim

PINK IS THE NEW BLACK

KARIM RASHID. A GLOBAL ICON OF
MODERN DESIGN.

New York - based designer Karim Rashid is one of the most prolific designers of his generation. Over 3,000 designs in production, over 300 awards and working in over 35 countries attest to Karim's legend of design.

The award-winning industrial designer has undertaken projects for hundreds of clients all around the world; Alessi, Artemide, Audi, Bozart, Cappellini, Estée Lauder, Giorgio Armani, Issey, Kenzo, Prada, Sony, Toyota and Umbra, just to name the most prestigious ones.

His style is best described as sensual minimalism. His ideas are techno-organic and info-aesthetic. They combine natural soft lines with convenient solutions.

“Good design is a rapture of experience. I believe objects and spaces should not be obstacles in life but raptures of experience. Objects become the organisms we live with.”

The magical light of vertical LED-illuminated strip evokes an individual experience of the space. Responding to a gentle touch, it will colour your world in one of the seven hues - for a while, or just for a moment.

MoodLite TECHNOLOGY. A TOUCH OF LIGHT AND COLOUR. DAY IN, DAY OUT, YET DIFFERENT EACH DAY.

It allows a play of colour, and affords endless freedom to the inspiration and emotions of each moment. Do not adapt to the moment - let the moment be shaped by your desires.

MysticWhite, BabyPink, HotPink, DeepPurple, SkyBlue, LimeGreen, JuicyOrange. Your home can be different each day and each moment.

CHARM YOUR SENSES

Innovative technology. A touch of perfection. Reflections of magical light and modern aesthetics.

The colour of light echoes the colour of the moment. New generation ovens proudly feature a number of patented innovative solutions.

MoodLite

Aesthetics or functionality? Our cutting-edge technology delivers both. MoodLite technology does not only endow the ambiance with the desired hue of colour; when activated, it also affords a look into the oven interior, while the red tint will warn you of high oven temperature. The light band is both an aesthetic form and innovative function.

HomeMADE

The innovative design of the HomeMADE oven cavity, featuring a vaulted ceiling and rounded side walls, couples with precisely thought-out heater placement, delivers superior cooking results. This unique design is inspired by traditional wood-fired bread ovens and relies on highly efficient and fully uniform distribution of hot air.

DirecTOUCH

A perfect result in only three simple steps. Numerous preset programmes automatically set the right combination of cooking parameters and make sure for the excellent cooking result.

TOUCH THE MAGIC

Pure aesthetics. Unique graphics. A touch that stirs up new experiences. The alluring lines in the graphical pattern will seduce your senses. Discretely, subtly, yet convincingly they stress the sensuality of minimalism.

PowerBoost

The cutting-edge white hob boasts speed, low power consumption, safety, and touch control. The PowerBoost function additionally increases the performance and capacity of the induction zone.

LIGHT YOUR WAY

The freshness of new form. Innovative features. Endow your space with air and light. A single touch of the moodlite strip will turn the space into an oasis of select hues that will caress the senses and evoke a very special atmosphere.

Touch Control

The electronic setting of the cooker hood is a breakthrough in user-friendly operation. Carefully studied positioning of the control section on the LED-illuminated stripe enables simple setting of the extraction power, adjustable in four levels.

MoodLite

The multi-colour LED-illuminated stripe visually merges the cooker hood with the oven. Colours for every mood and ambiance. Smoothly uniform and harmonious.

BO87KR

Built-in oven

\$42,800

Design:

- Brushed aluminium finishing
- LED illuminated stripe: 7 colours
- HomeMADE design cavity

Features:

- DirecTOUCH electronic control
- 13 cooking functions :
 - Conventional heating (upper heat + bottom heat)
 - Upper heater
 - Bottom heater
 - Small variable grill
 - Large variable grill
 - Large variable grill with fan
 - Hot fan
 - Bottom heat with fan
 - Bottom heat with hot fan
 - FastPreheat
 - WarmPlate
 - StayWarm
 - Defrost
- 8 automatic programmes setting
- 3 memory settings
- Start delay
- Alarm timer

Cleaning features :

- AquaClean
- EcoClean enamel
- Full glass inner door
- Drop down grill element

Safety systems :

- DynamiCooling System+
- Cool Door (3-layer of glass + 1 reflective layer)
- Child lock
- Safety door lock

Technical information:

- 65L usable volume
- 275°C max. temperature
- Total connected load: 3300W

Supplied accessories:

- 3-level telescopic guides
- 1 deep baking tray
- 1 shallow baking tray
- 1 oven grid
- 1 grease filter

Appliance dimensions:

- 595H x 597W x 547D

Built-in dimensions :

- 583-590H x 560W x 550D

Made in E.U.

Indent Only

If a piece of kitchen furniture with a handle for opening (2) is installed under the oven (a drawer, cupboard), the distance between the bottom of the piece of furniture (1) and the upper edge of the handle (2) must be at least 8mm.

IT641KR

Built-in 4-zone induction hob

\$30,800

Design:

- White ceramic glass
- Aluminium grinded edges

Features:

- Smart touch control
- 9 power levels
- Booster function on all zones
- Melt/ keep warm function
- Stop/Go function
- Minute minder
- Timer

Safety systems:

- Residual heat indicator
- Pan detection
- BoilControl
- Safety switch off
- Overheat protection
- Child lock

Technical information:

- Cooking zone output (diameter):
 - Front left: 2.3/3.7 (210mm)
 - Front right: 1.85/3.0 (180mm)
 - Rear left: 1.4/2.2 (145mm)
 - Rear right: 1.85/3.0 (180mm)
- Total connected load: 7400W

Appliance dimensions:

- 43H x 600W x 514D

Cut out dimensions:

- 560W x 490D

Made in E.U.

Indent Only

DQGA65KR

60cm wall mounted cooker hood

\$31,800

Design:

- Brushed aluminium finishing
- LED illuminated stripe: 7 colours

Features:

- Electronic touch control
- 4 speed levels
- Exhaust or recirculated air operation

Technical information:

- Max. airflow: 730m³/hr
- 2 x 20W halogen light bulbs
- 1 aluminium grease filter
- 150mm tube connection
- Optional charcoal filter
- Total connected load : 220W

Appliance dimensions:

- 1040-1550H x 595W x 382.5D

Made in E.U.

Indent Only

DESIGN THAT LASTS

The secrets behind great design - *Gorenje Pininfarina*

Gorenje Pininfarina Collection is a perfect fusion of technological perfection and imaginative form: there are no knobs or handles to disrupt the smooth lines luring your eyes. Your gaze will rest and feast on the noble lustre. Timeless elegance of anodized metal finish and the charming fragility of glass. Purity of design harboured by the excellence of materials.

DESIGNED BY

pininfarina

www.gorenje.com/pininfarina/steel

ETERNAL AIR OF PERFECTION

Paolo Pininfarina, chairman of Pininfarina S.p.A., is a globally renowned designer famous for its automobile designs - most notably, the cult Ferrari. Its cooperation with Gorenje dates back two decades.

Gorenje and Pininfarina believe that by combining the principles of excellence in design and the latest technology, they have created future classic, a design that is determined to survive, outlive trends and become an icon - Design That Lasts.

“The complementarity of top design, advanced technologies and innovation is obviously a good formula for successful cooperation.”

Design of the Gorenje Pininfarina Collection is an invigorating unity of opposites. Tradition and durability are intertwined with radiantly bright and unpredictable future. The unstoppable elegance and subtlety of the form are combined with quality and technological perfection to forge a future in which you can enjoy today. Time is on your side. The surprising combination of materials will enchant and entice you. Simplicity of use will convince and thrill you. The interplay of the two will result in a perfect mosaic, a harmony of the beautiful and the efficient. Impermanence of the world and the hedonistic air of the moment coalesce in the timeless trail of perfection of the Gorenje Pininfarina Collection.

OVEN

Touch control screen

Smooth glass surface is easy to clean and the screen offers a wide array of possibilities. For example, it allows you to store your own combination of cooking functions and to browse your favourite recipes.

Oven door

The black glass stripe on the oven door is a daring experiment in transparency and illusion. The oven light neutralizes the tinted grey tones and reveals a transparent, clear glass, offering an unmatched view of the delicacies you are preparing.

Pull-out telescopic guides

The oven boasts pull-out telescopic guides, which make it easy to take out hot trays and improve control of the cooking or baking process.

HomeMADE

A unique innovation modelled on traditional wood-fired bread ovens! Gorenje multi-system ovens with unique arched cavity ceiling and original HomeMADE technology that allows the effect of the traditional wood-fired oven also boast exceptional volume and maximum useful baking area.

27 auto programmed recipes

27 recipes are prepared for your easy access. Just select the dish that you want to cook and place it in the correct shelf level (as shown in the display), then press start. Just a piece of cake then you can get your dish well done.

HOB

MultiSlider control

The innovative MultiSlider control technology allows total control of cooking power, time, and other functions for each cooking zone separately. Each zone is controlled by sliding of your finger across the control area.

REFRIGERATOR

Touch control screen

Integrated in refrigerator's elegant silhouette is a vertical stripe made of black glass with an interactive touch screen. The user-friendly display expands refrigerator functionality as it turns it into the kitchen's communication hub. In addition to basic refrigerator functions, it allows recording and playing voice messages, viewing tips on food storage and browsing through recipes for delicious dishes.

Quick view

A panel of black glass runs vertically down the front. Activated by a touch screen, a square area of tinted grey glass in the middle turns into a transparent window to reveal a practical and exciting view into the fridge interior.

ServeTray

The combination of dark natural wood, durable aluminium and soft shapes pays respectful homage to the past while considering the future. The multifunctional pull-out shelf can be used as a serving tray.

Zero 'n' Fresh drawer

The two concave bins in Zero'n'Fresh drawer fit perfectly between the back panel and the door. Zero'n'Fresh compartment enables maximum use of space while providing a 0°C fresh zone for storing vegetables, fruit and meat.

Cosmetic boxes

How thoughtful! Two small white boxes adorning each side of the transparent window are the perfect place to store cosmetics or medicines. A small concave handle makes them easy to open.

THE NEW CLASSIC FOR TOMORROW'S KITCHEN

Distinctive by simplicity, style defined by ORA-İTO.

Minimalistic and elegant. The perfect harmony between elegant glossy surfaces of glass and brushed aluminium handles. For contemporary consumers who appreciate superiorly designed, technologically perfected yet reasonably priced trendy household appliances.

DESIGNED BY **ora-ito**

ENFANT TERRIBLE OF DESIGN

ORA-ÏTO. THE YOUNGEST STAR IN
THE HISTORY OF PRODUCT DESIGN.

Ora-ïto, the world-famous French designer of the young generation. He is recognized worldwide both as a visionary designer and a transversal design brand. He tackles each product with an innovative eye by putting aside established codes. His creations are marked with his signature "Simplexity" - the art of making complex object looks simple.

Ora-ïto has designed for the world's major brands, such as Artemide, Adidas, Citroën, Christofle, Cappellini, Davidoff, Dunlopillo, Guerlain, Heineken, L'Oréal, Supergrif, Toyota, and many more.

Cooking with your fingertips

The built-in oven is easily controlled via a touch screen neatly hidden in the glass above the oven door, allowing control of the numerous oven functions.

“I wanted to design appliances fit for any kitchen. I omitted everything redundant, only the pure essence of the product remained.”

GLASS FINISH FOR AN EXQUISITELY LUXURIOUS APPEARANCE.

Elegant black or white glass surfaces covering the entire front of each appliance in the collection are in perfect harmony with the design of the wide brushed aluminium handles.

Beauty and power

Sensor control

By allowing simple and highly accurate temperature settings, the induction hob enables excellent control of the cooking process.

The exquisite cooker hood is controlled by cleverly hidden sensor controls. Halogen lighting gives perfect illumination right where you need it. The hood also features a class leading extraction rate.

THE COOL GALLANT

In spirit. Reveal. Something breathtaking.
Clear. As crystals. They make your heart
sing and delight your eyes.

Simplicity is its motto. It wears black in order for the crystals to shine through, offering them modestly to the jealous eye. This is not a dream. Wherever you put it, it will be the center of the attention.

It does not have to prove itself to anyone.

Touch control display

The interactive touch control display can be set in your own language and extends the refrigerator functions. A simple touch on the LCD screen is all it takes to access numerous functions offered by the appliance, such as the integrated radio tuner with high-quality stereo sound, a list of recipes with information on the calorie, or advice on storing particular types of food.

MultiFlow technology

The most efficient fridge air cooling system! MultiFlow accelerated air circulation technology provides a constant temperature. Cool air is blown through the vents in the fridge back wall directly into the drawer.

Zero 'n' Fresh drawer

The sensor controlled temperature is maintained at about 0°C in the Zero 'n' Fresh pull-out drawer and provides an ideal environment for the storage of perishables, locking in and preserving their freshness for longer.

Big 'n' Freeze drawer

This special freezer pull-out drawer will impress you with its exceptionally large capacity and outstanding accessibility to the stored frozen items. Equipped with telescopic guides, the drawer can be pulled out entirely - without the danger of falling out.

Tube holder

It enables easy storage of tubes, eliminating the usual mess. Since tubes can be placed in the holder upside down, their contents are easily accessible even when a tube is almost empty.

www.smar-table.com/en/

SMARTABLE

A TRANSFORMATION OF SPACE

A big concept of the new culture of living.
The SmarTable with an integrated refrigerator. The new convertible!

What's your notion of prestige?

You bet on the new. You dare to live with the new. True luxury lies not in the price but in the options offered. True luxury is living according to your own individuality. That is what makes SmarTable a luxurious invention. A SmarTable with an integrated refrigerator is an independent and free element of interior design in an elite setting. You decide where to actualized its real value. That is the true sense of prestige.

A revolutionary design concept

What is the purpose of a table? Where is the proper space for a fridge? Forget the dully predestined everyday concepts. Do not restrict your mind to straight horizons. An innovative change in reasoning has placed a refrigerator where cool gourmet delights are the most welcome: at the heart of a table, at the focal point of a social space, a conference room, or an eminent reception hall. The new convertible is a daring reply to such everyday questions.

Lush version of the good life

It stores and cools select beverages and food for six to eight people. Exquisite champagnes, wines, other beverages as well as cold cuts, delis, fruits, vegetables, and cool appetizers will enrich your business and social gatherings as well as those welcome quieter moments of privacy. A cheese platter for breakfast, a multi-course culinary masterpiece for dinner and many smaller pleasures any time in between

The superior master of surprise

Refrigerated plateaus with food and beverages will appear on the table upon a single touch on the remote control. The central cylinder supports the luxurious surface and houses a fully integrated refrigerator with adjustable shelves attached to a rotating shaft. A remotely controlled mechanism raises and lowers chilled revolving plateaus to the desired height.

A PRESTIGIOUS CHOICE: 14 precious materials

You choose the luxurious material from which it will be crafted. You choose the shape and size. 14 precious materials are available – from solid granite to a selection of tinted glass or wood. Upon request, the SmarTable can be customized to meet individual requirements, creating the perfect harmony with the convertibility of almost any space of your choice.

REFRIGERATOR COMPARTMENT: Lacquer-coated steel or stainless steel and siligor

The refrigerator is housed in a decorative casing made of lacquer-coated or stainless steel. The base is made of artificial stone Siligor.

The central refrigerator compartment can also be ordered as a stand-alone element. The refrigerator compartment, when purchased without the table top, can be installed or built into any other piece of equipment.

INTERIOR EQUIPMENT

The refrigerator has two support plateaus, or shelves. The height-adjustable shelf can be removed. The shelf support pillar is revolving. The temperature of the refrigerator compartment can be set from +1 to +15°C.

The interior refrigerator equipment is adaptable. The refrigerator can be used with one or two shelves, or without any at all. The choice depends on the type of food and drinks that are to be stored inside the SmarTable.

A MERRY-GO-ROUND for merry social events

The refrigerator compartment, which is integrated into the central part of the table, can be set to the desired height and rotated. Thus, it works as a turntable, allowing everyone at the table to reach for the served delicacies. Even when the refrigerator retracts back to its closed position, the central part of the table – the turntable – can still be rotated as a serving tray, hence contributing to an even more sociable atmosphere.

Design:

- Innovative table with refrigerator inside
- Tabletop material can be selected from 14 precious materials or custom-made

Features:

- Electronic control with remote control
- Automatic defrost
- LED interior lighting
- Accident prevention system: the system comprises of three pressure sensitive sensors, which are activated when more than 60g of weight is applied. When detected, the system automatically shuts off.

Technical information:

- Refrigerant: R600a
- Temperature range: 1 to 15°C
- Energy consumption: 0.61kW/24h
- Total connected load: 200W
- Net weight:
 - Refrigerator compartment: 107kg
 - SmarTable base: 53kg
 - Tabletop – Wood: 37kg
 - Tabletop – Glass: 59kg
 - Tabletop – Granite: 150kg

Product dimensions:

Table: 1700 x 750H
Refrigerator compartment: 933 x 750H

THE PURE THE PERFECT LINES OF APPLIANCES IN HARMONY

With no rules set in stone to follow, everything is possible. Thanks to their technological perfection, the appliances enable exactly what the person touching them. These patented innovations are not only a technological novelty, but also a fresh view of how we live: each in our own distinct way. The new generation of built-in Gorenje appliances is for each of us our own private story.

The PURE line disarms with its clear surfaces emphasised by minimalistic metal elements. The colour selection and the vertical-horizontal compositions provide the harmonious link to other kitchen items. The ergonomically designed handles and knobs ensure comfortable use, as well as clear and simple control.

CULINARY PLEASURE FOR EVERYONE

Numerous innovative solutions, including the DirecTOUCH easy control through a large LCD screen and HomeMade efficient oven cavity shape, provide excellent cooking, roasting, and baking results and place Gorenje at the top of European built-in ovens.

DirecTOUCH CONTROL

 DirecTOUCH, navigation to perfect result

This patented electronic programme module has virtually revolutionized the touch-screen operation. Electronic module shows the cooking procedure in step-by-step, guiding you to perfect cooking result. Three simple steps are all it takes – cooking has never been easier!

1. Turn on the oven
2. Select the dish you want to cook
3. Press "Start"

 **Chicken**

Roasting on the grid in middle level guide, dripping pan is placed one level below. The temperature setting will be 170°C, duration 1 hour for a chicken of 1 kg.

 **Pizza**

The oven will preheat for 8 minutes to 200°C. After preheating, place the pizza in the middle level guide in shallow pan or on a baking stone. Baking time 10 minutes for a pizza of 400 g.

 **Pork chops, fish**

Roasting on the grid in the upper level guide (dripping pan is placed one level below) with door closed. Turn the meat around halfway through roasting. Oven temperature is 250°C, roasting time 25 minutes for 4 x 200 g.

 **Pork chops, roast**

Roasting in small pan on the grid in the middle level guide. Oven temperature is 195°C, roasting time 1 hour 50 minutes for 1 kg roast.

 **Biscuits, brownies**

The oven will preheat for 5 - 6 minutes to 160°C. Roasting in shallow pans at two levels simultaneously (2nd and 4th from the bottom). Baking time 25 minutes for 2 x 300 g.

 **Raisin cake**

Baking in dark raisin cake mould on the grid. Place it in the 2nd level guide from the bottom. Oven temperature is 160°C, baking time 1 hour for 1 kg of dough.

 **Bread**

Baking on shallow tray in middle level guide. The temperature setting will be 200°C, duration 1 hour and 15 minutes for a 1.5kg of dough.

 **Rising of yeast dough**

Preheating for 3 minutes to 40°C. Rise dough in a bowl, placed on the grid in 2nd guide from below.

 **Defrosting**

Place the frozen food on the grid in the middle of the oven. Dripping pan is placed in the guide below.

 **AquaClean**

Pour half a liter of tap water into a deep baking tray and place it in the 2nd level guide from the bottom. Set the oven temperature on 70°C for half an hour.

 Touch control electronic programming timer

Gorenje ovens feature innovative, sensor controlled electronic timers. Touch control enables you to set the cooking time and select the right temperature, which can be monitored on the control panel display during the entire cooking time. The electronic programming timers – Gorenje’s innovation for a user friendly operation!

HomeMADE INNOVATION

HomeMADE

A unique innovation modelled on traditional wood-fired bread ovens.

With great insight, a vaulted oven design for superior baking results typically associated with traditional wood-fired bread ovens! An innovative design solution for the next generation of Gorenje built-in ovens involves a precise positioning of the heating elements for perfect baking. Smooth, rounded edges on the rear panel and vaulted interior ensure a more efficient circulation as well as an even distribution of hot air inside the oven. The result? Evenly baked, succulent yet crispy dishes; soft bread with a perfect crust; many of your favourite foods cooked just right - the way that until now you could only dream of.

Gorenje's original and insightful approach to oven design is homage to traditional experience and the result of a fruitful cooperation with renowned research institutions. A unique novelty with a tint of ancient wisdom!

Energy Efficiency A++

The estimated savings by the new generation of cooking appliances in comparison with older models can save as much as 25% in energy. Gorenje cooking appliances are made from materials which can be 90% recycled.

Memory settings

BO8750AX allows you to have your personalized cooking setting; your favourite cooking recipes can be memorized for your easy access in the future.

 PerfectGrill for a perfect crust

The large upper and the smaller lower infrared heating elements are safely hidden in the depth of the recessed, vaulted oven ceiling while the difference in their relative heights ensures that food is cooked evenly and perfectly, every time. In selected models the upper heating element can be tilted down, which makes the oven easier to clean.

 WarmPlate, for professional service

Warmed plates prevent the loss of flavour and ensure that food tasted every bit as good as it should. WarmPlate will keep your crockery at precisely the right temperature – anywhere between 30°C and 80°C, which can prevent the loss of flavour. Enjoy professional service in the privacy of your home!

 StayWarm, keeping dishes at right temperature

Setting the temperature between 30°C and 95°C allows you to keep the food at the desired temperature for up to two hours. Dishes prepared in advance will retain their taste and stay warm before serving. With this brand new feature planning and serving multi-course meals become easy, and there is no problem if your guests arrive late!

 FastPreheat, 200°C in 6 minutes

By virtue of the oven's special vaulted design and concurrent operation of heating elements, it takes only 6 minutes for the oven temperature to reach 200°C. A minimum of 30% time saving.

BigSpace, large oven capacity

With the 65-litre useful capacity, Gorenje ovens can easily accommodate even a 7 kg turkey. Despite its super-size capacity the oven boasts Class A++ energy rating.

Super-size baking area

46 cm oven size has a 15% larger baking surface, which is the result of a fresh approach to oven design. Makes it possible to fit larger quantities of food on a single tray, both when it comes to single-rack as well as multi-rack cooking.

Extendable telescopic guides. For safety and better overview!

Telescopic guides, which can be withdrawn completely, make it easy to take baking trays into the oven and take them out again, in addition to give you a better overview of your baking. The risk of sustaining a burn is thereby significantly reduced.

Meat probe, perfectly baked without frequent checking

Selected models of Gorenje ovens come with a meat probe, which allows you to directly monitor and control the baking of your meat. All you need to do is insert the probe tip into the meat and set the temperature to the desired level. The indicator on the control panel will alert you when the meat is done just the way you like it.

ULTIMATE SAFETY

Low temperature oven door

Gorenje ovens are fitted with safe and energy efficient Cool Door (CD), feature triple-glazed glass. More sophisticated models feature Ultra Cool Door (UCD). Superior door insulation in conjunction with special reflective glass layers improves oven performance together with significantly lower energy consumption. A low exterior door temperature keeps you safe from burns when touching the oven door.

Spacious oven ceiling for extra safety

The oven ceiling is slightly recessed - just enough to accommodate the top heating element. This feature enables a better use of the oven interior and results in improved safety. This way, the risk of inadvertently touching any hot parts when reaching inside the oven is drastically reduced. The upper heating element can be tilted down, which makes the oven even easier to clean.

Cool oven panels with DynamiCooling

A highly efficient cooling system designed to keep the temperature of oven panels down during the cooking process (DynamiCooling - DC) as well as afterwards (DynamiCooling+ - DC+) ensures significantly cooler outer surfaces of oven panels.

A fan mixes cooler ambient air with the hot air in the oven, forcing the cooled mixture to circulate right under the exterior panels of the appliance (DC). Once the oven has been switched off, a heat sensor keeps the fan going until the oven temperature has dropped below 60°C (DC+). DynamiCooling significantly improves the safety of oven cooking.

Oven door switch

To prevent the hot air blows directly to your face when you open the door during operation, the smart door switches all the heaters and the fan off when you open the door and, when the door is closed again, the heating resumed. (on selected models only)

Safety door lock

It is an effective device that prevents children from opening the oven door during operation. The door can only be opened by a slightly pressing your thumb to the right and simultaneously pulling the door outwards.

Child Lock

Child lock function allows locking the oven settings. When the settings are locked, uncontrolled or undesired operation is prevented, which protects particularly the children from situations when oven would have been switched on accidentally.

EASY CLEANING

Superior EcoClean enamel

The oven interior features EcoClean enamel coating, which is so smooth and impermeable that heat is reflected into the center of the cavity rather than absorbed into the panels and trays. This innovative solution produces an even distribution of heat inside the oven, which delivers significant energy savings and outstanding cooking results.

The non-stick coating also prevents fat from adhering to the panels of the oven or the tray, which in turn makes cleaning a piece of cake.

Smooth oven door surface

Easily removable oven doors feature no visible screw holes, rubber seals or notches, that is, no more dirt traps; which means that they can be quickly and easily cleaned.

Catalytic self-cleaning lining

Some Gorenje oven models feature superior EcoClean enamel coating with catalytic lining on the rear panel. Owing to the catalytic coating, food and juices splashing from the baking tray are decomposed already during the cooking process. The procedure is based on a chemical reaction that causes oxidation upon contact with fat at high temperature. Fat residues are thus continuously broken down and your oven is clean even in those hard-to-reach spots.

Cleaning made easy with EasyClean liners

Easily removable EasyClean liners on both side panels and catalytic lining on the rear panel are designed to help you keep your oven clean. The liners feature super smooth EcoClean enamel coating, which means that warm water is all you need. Or you can simply remove them and let the dishwasher do the job for you!

Easy maintenance with AquaClean

All oven models additionally feature the highly convenient AquaClean option. Just pour half a litre of tap water into a baking tray, place it into the cavity and select the AquaClean option. The steam generated by the auto-heat programme (70°C) acts to soften the dirt on the oven walls. After approximately half an hour simply wipe down the oven with a soft cloth. Using no cleaners whatsoever, the result is astounding as well as environmentally friendly.

OVEN FUNCTIONS

In order to make your cooking quicker and easier, Gorenje oven provides you just the right cooking functions to achieve the best results time after time whatever style of cooking you require.

Conventional heating

Ideal for single shelf cooking, heat uniformly radiated and evenly into the oven interior, it is ideal for baking bread and larger cakes.

Upper heat

Only the upper heating element is used. It is ideal for soufflés and vegetable gratins – or any dishes you wish to brown on the top.

Bottom heat with fan

Used for baking low leavened dough and preserving fruit and vegetables.

FastPreheat

Use this function to preheat the oven to the desired temperature as soon as possible.

Bottom heat

The heat is only radiated by the bottom heater, use it when you wish to bake the bottom side of the dish more thoroughly.

Small infra grill

This mode enables you to save energy when only a small pieces of meat to be grilled, as you don't need to switch on the whole grilling area. It is appropriate for grilling smaller quantities.

StayWarm

It can be used when you wish to reheat the already prepared/ cooked dishes.

Hot fan

The fan at the back wall makes the hot air to circulate constantly around a roast of pastry. This mode is appropriate for roasting meat and making pastry on several shelves simultaneously.

Large infra grill

It provides even browning result for the whole baking area. It is appropriate for cooking smaller chunks of meat, such as steaks, roasts, chops, ribs, etc.

WarmPlate

Warmed plate can prevents the loss of flavour and ensures that food tastes every bit as good as it should.

Bottom heat with hot fan

This function is particularly convenient for making pizza, also ideal for moist or heavy pastry, fruit cakes made of leavened dough, short pastry, or cheese cakes.

Large infra grill with fan

It is suitable for grilling meat and large chunks of meat or poultry on one shelf level, it makes roasts perfect.

Defrost

Only the fan is in operation. This is used for slow defrosting or thawing of frozen food.

OPTIONAL ACCESSORIES

Steam insert \$4,300

Our special steam insert set can convert any Gorenje oven into a useful steam oven by just simply insert the steamer set into the oven cavity. A three-piece steam insert set includes a flat strainer, a deep enamel tray and a glass lid.

Professional grilling tray \$1,800

This kit is made of superior, silicon coated aluminium alloy which heats up exceptionally fast and is ideally suited for oven-cooking of culinary delights. The heat seals in the moisture, aroma and flavour, ensuring that your filets, steaks or salmon cutlets are cooked to perfection every time. And best of all, you don't need to add any fat what so ever!

Pizza set \$1,800

The tray is made of stone and doesn't need to be oiled, which ensure your pizza less greasy and extremely crispy. The three-piece pizza set includes a wooden peel, hot stone base, and a pizza cutter.

Glass baking tray \$1,500

Baking pan made of quality glass enables a permanent overview of cooking process in the baking pan.

Extra-deep baking tray \$1,500

The extra deep 5cm baking tray is specially for making home-made bread, lasagne, quiches or similar.

BLENDED STYLE WITH FULL-SIZE OF FUNCTIONALITY

Gorenje's Compact Line is designed to mix and match for individual requirements. Whether you need to meet an enthusiastic cook's requirement or create a unique space and design concept, you can satisfy the requirement by using Gorenje's range of compact line.

STEAM OVEN

FULL STEAM AHEAD TO A WHOLESOME DIET

Cooking in compact combined steam oven retains full flavour of the food, vitamins, and nutrients. Simple control of many preset programmes and convenient functions allow preparing quality and balanced meals every day.

COMBINED STEAM OVEN

Gorenje's combined steam oven offering the possibility of preparing food with steam or hot air or even a combination of both! In addition to the numerous preset programmes and the various cooking functions, the oven distinguishes itself by a simple and comfortable touch screen operation.

Cooking with SteamPower

Steam cooking is a healthy way of preparing food, as it preserves all the nutrients, vitamins and proteins. The food is never overcooked, maintaining its colour, juices and flavour. During the cooking process, the oven is fed the steam from a special water heater. Due to an innovative configuration of the steam conduit, the steam is evenly sprayed inside the entire oven. The steam current is controlled automatically according to the selected preset programme; but if you prefer, you can also feed the quantity of steam needed for an individual dish yourself.

Perfect for steam and stew

Gorenje's steam oven allows you to steam for up to 4 hours and stew for 8 hours, without worrying about water refill. Ideal for Chinese style cooking.

Touch control electronic programming timer

Electronic timers are an innovation of user-friendly operation. With a simple touch, you can set the cooking time and temperature. You can choose from various preset programmes or set all the cooking, baking and roasting parameters yourself. Thanks to a control panel made entirely of glass, the cleaning is extremely simple, too.

Energy class A

Its energy efficiency places the combined steam oven in energy class A, which only admits appliances fully complying with the strict European guidelines in the field of energy saving and consequently with the preservation of our environment.

SEVERAL COOKING METHODS

Gorenje's steam oven allows you to prepare food in two very different, but at the same time very simple ways.

50 pre-set programmes

Choose any dish from the ample selection of fifty preset programmes. The modern electronic enables you to add another ten recipes tailored to your taste, which you can save and recall the next time you use the oven.

6 cooking functions

There are 6 cooking functions available and suitable for defrosting and warming, steam cooking or hot-air roasting, as well as preparing dishes with a combination of steam and hot-air cooking.

Low Temperature Cooking

The method of cooking at low temperature is suitable for food that requires longer cooking time. With the help of the probe enclosed with the steam oven, you will be able to prepare a delicious, evenly roasted meat dish.

Regeneration

Steam combined with hot-air warms the oven faster, while maintaining the succulence of the food and ensuring it is evenly done. This function is especially useful in warming previously prepared, precooked and frozen foods.

Combined Cooking

This method combines the advantages of hot air and steam cooking. The steam can be introduced at any moment during the cooking process. After 10 minutes the steam is shut off automatically – though if you wish, you can switch off even sooner.

HotAir Cooking

The steam oven enables conventional dry-heat cooking of food. The fan circulates the hot-air around the oven and makes sure the food is evenly cooked.

ProCooking

This function allows cooking in several stages, a system especially suitable for the preparation of soufflés and various types of dough.

Steam Cooking

Steam cooking preserves all the nutrients and vitamins in the food.

Cooking on multiple levels

The steam oven enables you to steam cook your food on two levels simultaneously or bake your small cakes with the conventional hot-air method on three levels at a time! The fan at the back of the oven provides for an even and rapid distribution of the heat. The more efficient circulation of hot air ensures excellent baking, cooking and roasting results, while also saving time and energy.

Temperature meat probe

Gorenje's steam oven is equipped with a special probe intended for monitoring the cooking of your meat. Insert the probe in the roast and set the desired temperature. The indicator on the oven control panel will alert you when the meat is done exactly the way you want it. Thanks to the temperature probe, your roast will always be perfect.

Night Mode lighting

The steam oven features the "Night mode" function, thanks to which the numbers on the screen are displayed at a lower intensity between 10 p.m. and 7 a.m., so that the screen does not waste energy or needlessly light the room.

AutoClean

Gorenje's steam oven also comes with an excellent solution for the limescale deposits in the appliance caused by hard water. After a certain number of cooking cycles, the oven reminds you with a note on the display that limescale should be removed. With a simple touch of the screen you can select the appropriate function and activate the descaling programme.

CoolDoor - the coolest oven door

Gorenje's steam oven is distinguished by a safe and energy efficient door known as CoolDoor (CD), with a triple heat reflective glazing. The excellent isolation of the door combined with the special reflective layers on the glass increases the capacity of the oven and considerably reduces energy consumption, while the low temperature of the outer side of the door protects cooks from contact burns.

Another smart feature of the appliance is a sensor which immediately switches off the two heating elements and the fan anytime the door is opened during the operation of the oven, thus diminishing the danger of burns.

Warming Drawer

The functionality of the steam oven can be further upgraded by a warming drawer, available separately. The drawer is installed right under the compact appliances, the entire composition fitting perfectly into the furniture element.

ESPRESSO COFFEE MAKER

AMBROSIAL AROMA OF CAPPUCCINO

Fully automatic built-in coffee machine with clean design and the lustre of stainless steel offers coffee beverages to your taste. Appliance also prides on comfortable and simple control, unique functions, and the option to prepare coffee of numerous different tastes.

PROFESSIONAL COFFEE MAKING

Autocappuccino

A unique function enables the preparation of excellent Italian coffee with one single touch. The control panel, on which, all the available functions are clearly displayed, features a special button that enables the brewing of a cappuccino preserving all its superior characteristics. Pleasure guaranteed at the press of a button.

A Palette of coffee flavours

Just choose whole bean or ground coffee and leave it to the machine to prepare the beverage. The combination of an automatically set amount of scooped coffee and the possibility of manually adjusting the fineness of the grind enables the machine to serve five types of coffee, characterized by different textures and aromas: extra mild, mild, medium, strong and extra strong.

In addition, you can also choose between single, medium and double shots of espresso coffee. You can always select the preparation of two cups of coffee at a time.

Tailored taste

Modern technology offers a simple way to set your own coffee making programme. The amount of coffee set after your own wishes will thus be available to you at a mere touch of a button. You can choose your favourite flavour from the selection of coffee tastes available before each brewing and enter the quantity of coffee in the machine's memory, thus saving your own programme for preparing coffee.

PRACTICAL SOLUTIONS

Automatic cleaning

After brewing coffee you can activate the cleaning function by simply pressing the "CLEAN" button for a few seconds, thus guaranteeing antibacterial treatment both of the milk dispenser as well as of the inner suction tubes. Since the machine performs an automatic washing cycle at every switch-on and shut-off, washing away any coffee residues from the dispensing nozzles, no additional cleaning is necessary nor is there danger of the nozzles clogging.

Easy descaling

Due to various degrees of water hardness, it is recommended that after some time the machine is descaled. The descaling programme can be activated by simply pressing the respective button. All removable parts of the coffee machine are dishwasher safe.

The right dose of freshly ground beans

With the Gorenje coffee machine you can adjust the fineness of grind for your coffee beans, choosing from no less than 9 levels of fineness. Grinding the beans just before making coffee preserves its aroma to perfection. But you can also use previously ground coffee, of course.

The milk container

Extraordinarily large milk container allows simultaneous preparation of several cups of cappuccino - without having to add milk each time. But there is more! The milk container can easily be removed and stored in the refrigerator till next time you want to use it.

Warming drawer

The functionality of the machine is further upgraded by a warming drawer, available separately. The drawer is installed right under the coffee machine, the entire composition fitting perfectly into the furniture element designed for built-in ovens. The drawer is used for warming dishware, but also food. With it you will be able to serve fresh coffee in suitably warmed cups.

CFA9100E

Built-in compact espresso machine

\$28,300

Design:

- Stainless steel finishing

Features:

- Electronic soft touch control with LCD display
- Language setting

REHEATED OR CRUNCHY

GourmetWave technology presents a quality and fast choice of food preparation using microwaves. Uniform thermal treatment of food is delivered by constant control of cooking power that efficiently distributes the heat. Thus, the food will retain vitamins and nutrients.

MICROWAVE TECHNOLOGY

GourmetWave System

The Gourmet Wave System technology ensures an even distribution of heat throughout the cavity, giving you faster and better cooking results while also retaining vitamins and other nutrients in the food. The continuous monitoring and control of the power level speeds up the conversion of electricity into microwaves, ensuring a more even microwave distribution in comparison with conventional microwave ovens, resulting in a superior performance. This technology not only saves you time but also delivers significant energy savings - up to 15 %.

Superior defrosting and browning in microwave mode

The CyclicDefrost option featuring a random sequencing of the microwave pulse energy penetrates the food from the inside, defrosting it more evenly and more quickly. The Turbo baking feature used in conjunction with hot air and grill will help you produce crispy, golden brown goodies.

Touch control

Touch control provides excellent clarity, simple operation, and easy choice of programmes. Control panel is completely smooth and therefore easy to clean.

Multi-function ovens: microwave, convection and grill

Gorenje built-in microwave ovens bring you all the advantages of microwaves, hot air and grill, while their combined use opens up a whole new world of culinary options and experiences. There are six different power level settings to enable the microwave to speed up your cooking, while hot air ensures perfectly even cooking results every time. The combined use of the grill and microwaves can be used to great effect when cooking smaller cuts of meat, pizza and many other foods.

GOURMET PLEASURES “A LA CARTE”

Advanced induction technology delivers extra power to cooking zones in a variety of makes and dimensions. Special functions upgrade the basic solution to afford very simple use, and excellent clarity and control over the cooking process.

XtremePower INDUCTION HOBS

XtremePower a true power boost

The new generation of Gorenje XtremePower induction hobs offers incredible power! When the PowerBoost function is activate, high-performance induction coils made of state-of-the-art materials, and two cooling fans with double operating power will kick in to supply extra power to the hob. Thoughtfully devised electronic switching between cooking zones distributes the power between built-in inductor coils to enable cooking with the highest power setting on all cooking zones!

Rapid and economic

Time needed to heat 2 litres of water from 15°C to 90°C (in minutes)

XtremePower induction	4.2 min
XtremePower induction without PowerBoost function	5.7 min
Induction with PowerBoost funcntion	6.5 min
Induction	7.1 min
HiLight hob	10 min

SlideTouch control at your fingertips

You can set the temperature by simply moving your finger over the multipoint temperature scale of the hob. Complete control over the cooking process at your fingertips is the result of the increased sensitivity and responsiveness of your hob.

FishZone Oval Heater

XtremePower induction hobs are fitted with a cookware sensor to deliver optimum cooking zone usage. Ample offer of induction hobs also includes a model with a special oval heater, particularly handy for cooking or frying fish or large chunks of meat.

SoftMelt

With the SoftMelt function, the cooking zone maintains a constant temperature of 42°C, allowing you to melt honey, butter, and chocolate without any additional hassle. Such setting is also appropriate for melting frozen ready-to-eat meals and minor quantities of frozen vegetables.

StayWarm

The StayWarm function will keep your cooked food warm at an optimum temperature of 70°C. The food will thus retain the flavour and stay warm to be served later. These innovative functions will simplify the way you cook, prevent overheating, and save power. An excellent addition to your cooking options!

StopGo: safe cooking

The StopGo function instantaneously turns off all cooking zones while saving all current settings; a simple touch will restore the cooking process. Hence, if the food boils over, the StopGo function can be used to let you clean up and simple continue as soon as you are done. The StopGo function will keep your cooking under control, even when, for any reason, it is interrupted.

SMART COMBINATIONS AND SPECIAL SHAPES

A brand new shape: the “4-in-a-row” hob

The attractive 4-in-a-row hob, with its series of four ergonomically positioned cooking zones, enables full visibility as well as the placement of various utensils in front or behind the cooking area. This hob is also distinguished by its unique electronic control, enabling temperature regulation through simply moving a finger over a multipoint scale on the surface of the hob.

Domino, designed for the individual

Hobs with two heating zones allow combinations tailored to one's needs. The Gorenje range encompasses glass ceramic induction hob, as well as a hob with two gas or one wok burner.

Timer

When preparing a dish that you know how long it takes to complete, you can set the timer for up to 99 minutes. When the cooking is concluded, the hob switches off automatically and activates an audio signal.

Extremely easy to clean

As the hob only heats the surface directly under the pan, you do not have to worry about cleaning if a pan boils over, as nothing sticks or burns onto the hob. If something spills, simply wipe it away with a wet cloth.

Using the right type of cookware

Any pan with a ferromagnetic bottom (this can be easily checked with an ordinary magnet) can be used for cooking on an induction hob.

FOR YOUR MAXIMUM SAFETY

BoilControl: prevents boiling over

BoilControl system will automatically adjust the output power of a cooking zone. After initially operating at maximum power, the cooking zone will maintain the temperature at the desired level to prevent the food from boiling over or overcooking.

Overheat protection

It protects the electronic parts against damage as a consequence of excess heat. The device operates in several stages. When the temperature of a cooking zone increases considerably, it switches on a two-stage fan. Then, if necessary, it inactivates the power boost function, prior to any automatic reduction of power to the cooking zones and eventual switch off. When the hob cools down sufficiently, its entire heating surface and power is again available.

ChildLock for safety

The ChildLock function prevents children from interfering with or resetting the selected parameters, thus also providing protection against accidental activation and operation of the hob.

Safety switch-off function

In order to ensure maximum safety, the uninterrupted operation of each hob is time limited. When the time limit of continual operation is reached, the hob switches off automatically.

Residual heat indicators (H)

Ensuring even greater safety, residual heat indicators illuminate to reveal which zones of the hob are still radiating heat. As long as an indicator is lit, the respective zone should not be touched. It can, however, be used for defrosting or maintaining a dish warm.

A GAS HOB WITH A PROFESSIONAL TOUCH

Modern gas hobs equipped with ergonomically designed knobs and distinguished by excellent visibility enable a nonpareil preparation of dishes. Gorenje gas cookers are characterized by their superior utilisation of an open flame, which translates into a greater heat output and improved cooking performance.

Automatic thermal protection

For improved safety in your kitchen, the gas intake valve automatically closes in the event that the flame extinguishes during the operation of a burner!

Durable-pan support

Cast iron pan supports are extremely stable and highly temperature resistant. Optimal cooking performance is guaranteed.

Enhanced burner

Extremely powerful gas burners heat the pots on accelerated rate, which allows you to prepare your dishes within minutes. Vegetables will be crunchy and cooked just right, and will retain more vitamins, minerals and other nutrients compared to food cooked in a conventional way.

For wok lovers

Lovers of Asian cuisine will be thrilled by Gorenje's gas on glass ceramic hob, featuring improved high-capacity wok burners with a tailored-made wok support.

**Built-in 4-zone induction hob

HEAVY DUTY CAPACITY IN STYLE

A wide range of kitchen hoods of differing capacity, make, and appearance, are available to provide efficient ventilation of kitchen including elimination of odours, humidity, and grease particles. The space will define the required capacity; your personal taste will guide the choice of the perfect model for your kitchen.

THE HARMONY OF SHAPE

Functional design

Attractive design has become an important factor in our everyday lives; but good cooker hood design is simply not enough. A hood also needs to be functional. Gorenje's wide range of cooker hoods in different styles and shapes make it easy to find a model that adds a unique touch to any kitchen.

Good ventilation is vital

The purpose of a cooker hood is to maintain low pressure in the kitchen so that cooking odours are confined to the highest degree possible.

- To equalize the pressure, fresh air needs to be drawn into the kitchen, for example, through a door to the next room that has been left ajar. Remember never open a window that close to a cooker hood in operation, as it would only disturb the flow of air.
- There must be as much fresh air as possible. The cooker hood draws in saturated air through a filter, the air cools, and the fat particles are trapped by the filter, while the air is expelled to the outside.
- Metal filters are the most effective.
- All Gorenje cooker hood models are fitted with a non-return flap, which closes when the hood is not in use, preventing draughts from outside.

Useful tips

- Remember to switch the cooker hood on before starting to cook, as this maximizes the hood's capacity.
- Leave the cooker hood running for another 15 min once you have finished cooking to remove the last few traces of cooking odours.
- Choose a cooker hood that is at least as wide as your hob to achieve the best effect.

The necessary extraction capacity is determined by the volume of the kitchen.

The volume of the kitchen space can be calculated as follows:

width x height x depth of the kitchen

Volume calculation is performed as follows:

volume of the kitchen space x 10

PERFECTION OF TECHNOLOGY

AutoSense Automatic Hood

Controlled by a preset sensor, the hood reacts to any impurities or changes in the air. When switched off, it is closed; when switched on, it changes from a vertical-flow hood to a chimney hood that admits the air. This hood is distinguished by permanently clean glass; even when you do not have the time to wipe it clean; simply close after use, and the dirty particles will remain trapped inside.

P.A.S. SYSTEM - new technology

With its new perimetric advanced suction system, the P.A.S System, Gorenje is introducing a brand new, revolutionary suction technique. With the P.A.S. System the suction zone has been moved from the central part of the cooker hood to the outer edges. This provides improved and more concentrated suction, while also reducing energy consumption and noise levels.

Downdraft hood

This elegant and efficient solution is particularly suitable for wider cooking hobs in which cooking zones are laid out side by side. The downdraft hood is installed next to the hob to directly extract the steam and the odours during operation. It can be built into a kitchen island or installed on a worktop next to a wall since the position of the motor allows direct evacuation to outdoor, through the kitchen wall. Optionally, it can also operate in filter version with using a simply installed charcoal filter.

Ceiling-mounted hood

Architectural trends of modern kitchens without wall cabinets compel careful choice of the kitchen hood. One of the most elegant solutions is the ceiling-mounted hood which delivers maximum effect of steam and odour extraction.

Although ceiling-mounted hoods are installed farthest from the cooking hob surface, perimeter suction will provide extra power and airflow speed and thus ultimate performance.

**Island cooker hood
IDR4545X

HEALTHY FOOD STORAGE

Generation of efficient refrigerator boast carefully thought out interior with the new “VitroLook” aesthetics which, in addition to excellent view over the contents, offers easily intelligible icons to discretely suggest the most appropriate storage area for each type of food.

VERSATILITY AND EFFICIENCY

A++ energy efficiency

A bigger volume does not necessarily translate into a bigger electricity bill. In addition to excellent heat insulation, Gorenje fridges and freezers also feature improved door sealing, as well as state-of-the-art cooling system components and refrigeration electronics, all of which are designed to minimize energy consumption. Choosing one of Gorenje's highly energy efficient cooling appliances with energy performance rating A+ or A can bring you energy savings of up to 25%.

Compressor with valve

Single compressor models with a valve feature a notable advantage over the traditional single compressor refrigerators: with such appliances, the fridge compartment can be powered off while the freezer compartment remains in normal operation. This will provide additional savings when you are away for a longer period of time, e.g. when you are on holiday.

No Frost Absolute - no more laborious defrosting

Modern No Frost Absolute technology evacuates the humidity from the freezer by employing intensive circulation of cool air, to prevent accumulation of frost on the food and interior walls. Tedious defrosting and cleaning of the freezer is a thing of the past. In addition, this technology is employed to maintain optimum storage conditions for fresh food in the fridge compartment as well.

Advantages of No Frost Absolute

- Frozen food will not stick together;
- Space usage and clarity of view over the food in the freezer are improved;
- Quality, colour, and aroma of frozen food are maintained.
- Fully separated cooling and freezing process;
- No exchange of odour between the freezer and refrigerator compartment of the appliance;
- Optimum humidity in the refrigerator compartment;
- Fresh food will not dry out, which prolongs their quality.

IDEAL CLIMATE

SensoTech: accurate temperature regulation

Electronic control via a LED display allows accurate settings of optimum cooling and freezing temperature independently. Advanced models also feature separate temperature regulation for fridge and freezer compartments, which makes all the things under your control.

Constant temperature in the refrigerator

Due to the ventilator, which is built in the back wall, the cold air inside the refrigerator is constantly circulating. This provides quick and even cooling of the entire refrigerator and at the same time reduces the accumulation of condensation on the back wall and under the shelves. This creates ideal storage conditions for all kinds of foods, which stay fresh longer.

SuperCool function for cooling larger amounts of food

When the SuperCool fast cooling function is activated, the refrigerator will provide a boost to the cooling process, dropping the temperature to just above the freezing point. Low temperature, combined with large volume, is ideal for rapid cooling of food after major shopping trips.

FastFreeze rapid food freezing

Maintaining the quality of frozen food depends largely on how fast the freezing process is. When the freezing process is faster, the crystals that are formed are smaller and do not damage the cells in the food, thus allowing it to retain the vitamins, minerals and nutrients longer. With the FastFreeze function, the appliances freeze the food at extremely low temperature of -32°C . If the function is not deactivated manually, the fast freezing process is ended automatically after a certain period of time and the freezer returns to the initially set temperature.

Eco - economy program

During periods of less frequent use (door opening) or absence from home, such as vacation, Eco program can provide optimum temperature while saving power.

COMFORTABLE STORAGE

FreshZone compartment for perishable food

The next generation of refrigerator features a FreshZone compartment designed to preserve and lock in the freshness of highly perishable foods. A fan blows cold air directly into the compartment so that the temperature inside is the lowest possible within the fridge. As a result, fruit, vegetables and meat remain fresher much longer.

SnackBin

The SnackBin container provides an ideal place for the storage of food such as cheese, salami, spreads, paté or butter. A tight container seal keeps the food safe and protects it from drying out. The bin is placed beneath the glass shelf in the fridge. Hence, it can be easily removed and used as a serving tray. If required, it can be moved from left to right for extra flexibility of the space in the fridge.

Changeable shelf

A split top shelf in selected models allows you to further optimize the available space in your fridge. The shelf can be used as an ordinary shelf or it can be divided into two smaller shelves, which can then be placed one under another. This way, you can create a space for storing taller containers or bottles.

USEFUL VOLUME

The luxury of freshness

Convenient double door, appealing design, and environmentally friendly power consumption. The 540-litre Side-By-Side refrigerator stores a large quantity of food easily. In addition to remarkable spaciousness, it also boasts innovative concept of interior with glass shelves, large storage drawers, and convenient deep shelves and bins on the inside of the door.

Appealing design

The Gorenje Side by Side refrigerator, available in stainless steel, black, or white, is distinctive for its ergonomic handle, designed to match with the Pure line of appliances. Elegant appearance is further enhanced by the interactive LCD touch screen that provides comfortable operation and continuous control of the temperature in the fridge and freezer compartments.

Electronic control via LCD screen

Electronic control allows accurate settings of cooling and freezing temperature independently of the environment temperature. In addition, it offers the FastFreeze option and the holiday mode in which the refrigerator operates at 9°C and the freezer operates at -18°C. Thus, you can make sure the food is appropriately stored while you are away, without using too much power.

LED lighting

Gorenje Side-by-side model with sophisticated and economical LED interior lighting allows a clear view into the refrigerator and freezer compartment. Carefully thought out position of the lamps elegantly illuminates the entire interior regardless of how loaded the refrigerator is; at the same time, it allows maximum usage of space on the upper shelf.

Icemaker

The refrigerator is also fitted with a convenient icemaker and an additional drawer for storage of ice or ice cubes. Fill the rotating ice tray with water and let it freeze. Then, release the ice cubes into the ice drawer with a single twist of a button, and use the ice to refresh your beverages. Thus, you will be the perfect host at any time.

WITH TIME, EXQUISITE THINGS BECOME PRECIOUS TREASURES

The appearance of a wine cooler airs the quality in serving its purpose; the design is ergonomic, making the appliance easy to use. Smooth metal and glass surfaces comprise a straightforward form only that is occasionally accented by bevelled edges. Simple and discrete appliance design strikes one as sophisticated in the manner of classic elegance; the harmony of the entire composition creates a relaxed atmosphere of modern living.

Tempered glass door with UV protection

The specially coated 2-layer tempered glass door is scratch and heat resistant and also protects the wine from the harmful effects of ultra-violet rays.

Telescopic guides

Smoothly gliding shelves mean that you can select any bottle without disturbing the rest.

Quiet operation

Sound-proof and quiet operation is achieved through special design solutions: shock absorbing feet, special designed compressor and double glazed door with sound barrier.

Electronic control for accurate temperature setting

The temperature display shows the actual temperature inside the wine store. It allows you to adjust the exact temperature as you want. Gorenje's wine cooler also features tailor-made temperature setting for red or white wine, even for a wine lover in beginner stage, tasty wines are always reserved.

EFFICIENCY FOR SHINY DISHES

Optimum use of water and high energy efficiency are the features that distinguish our dishwashers. Convenient, user-minded programs and functions upgrade the possibility of washing up to 14 place settings at a time. Innovative stainless steel interior affords high flexibility in arranging the dishes.

WASH IN AN EFFICIENT WAY

Flexible size for every kitchen

Gorenje dishwashers fit well into different kitchen cabinets, suitable for different family size. The new compact dishwasher with 45cm height is specially designed for matching with other Gorenje compact appliances. It is also a smart choice for small family to enjoy the economical results from dishwasher.

Hygiene Programme

The Hygiene Programme includes additional water rinsing cycle followed by prolonged washing with hot water (at 70°C), leading to a sterilization effect. Hygiene programme will eliminate 99.9 percent of all bacteria. It was specially designed for families with young children who require a high level of hygiene on children's plates and bottles.

A+AA efficiency

High-quality dishwashers are ranked in the highest energy class to date; thus, they deliver extraordinary energy efficiency and considerable savings. In addition, they impress with A-rated washing and drying effect. From now on, you will wash your dishes responsibly and in an environmentally friendly manner, as Gorenje dishwashers fully comply with the stringent European Guidelines on power savings.

Automatic programme selection

The most sophisticated models feature an automatic programme that enables you to wash your dishes within two temperature ranges (party glassware or fine porcelain at a lower temperature, and other, less fragile dishes at a higher temperature). The sensors continually monitor the water in the dishwasher, identifying impurities and adjusting their operation accordingly, so as to deliver perfectly clean dishes whilst also ensuring the optimal consumption of water, energy and time.

Short turbo programme: QuickIntensive

The selected programme allows you to halve the time required to do the dishes by optimizing the stages of the dishwashing cycle. This way, the desired effect is also achieved at full load with your dishes done cleaned and with outstanding results.

3 in 1

Simply by activating the “3 in 1” function, your dishwasher will automatically detect which type of detergent you are using. If you are using a tablet, the dishwasher will adjust the washing cycle and omit using the rinse aid, making this function highly convenient. If you are using powder or gel detergent, the rinse aid is released to allow optimum dishwashing results and perfect shine.

SpeedWash

With lightly soiled dishes you can cut the time of dishwashing in half by simply pressing the SpeedWash button. It automatically adjusts the temperature and water level, thereby ensuring optimal cleaning and drying in the shortest possible time. Function could be used for following programmes: Intensive; Auto, Bio and A-10%.

ExtremeSilence, remarkably quiet operation

Special sound insulation, efficient motor complete with a support made of high-quality material, and innovatively designed washing system allow for virtually silent dishwasher operation. Gorenje's most quiet models operate at a declared level of 41 dB, which is equivalent to a quiet conversation between two people.

Economical with water as well

Dishwashers Gorenje also stand out with very low water consumption! Using up to 41 percent less water, these machines will allow you to actively contribute to responsible use of natural resources. The best models will even use as little as 9 litres of water.

*applies to the Eco program

Delay start

Some Gorenje dishwasher models also incorporate the Delay Start feature, which effectively enables you to set the time of the dishwashing up to 24 hours in advance.

ADJUSTED INTERIOR

SpaceDelux, remarkably spacious

A convenient third basket expands the dishwashing capacity to as many as 14 place settings! It comfortably holds cutlery and also allows placing longer cutlery items and coffee cups separately. Such layout also leads to better washing results, very simple use and optimum use of the washing space.

Height adjustable baskets

Both the upper and the lower baskets can be adapted to fit the size and the shape of your dishes. The racks in the lower basket can be folded to provide space for larger items. The upper basket can be moved up to create room for oversized plates. The party glass holder in the upper basket has been specifically designed for delicate stem glasses. The larger, bottom basket also features a compartmentalized cutlery basket to accommodate all types of kitchen utensils.

Long cooking utensils

The Gorenje models, Premium and Exclusive, feature a handy flap in the upper basket to hold long cooking utensils. This way, you can optimize your load and rest assured that items are held securely and will not slip to the bottom of the dishwasher during the dishwashing cycle.

MultiClack system

A convenient solution for washing larger pots, pans, plates, and glasses! Gorenje washing machines feature an excellent three-level basket height adjustment system. Lifting the baskets, when required, is now even easier since the height adjustment mechanism is fitted on both sides of the basket. The MultiClack system allows more flexibility while washing the dishes.

AquaStop anti-flooding system

With the AquaStop safety feature, the dishwasher can be safely left to operate at night as well as in your absence. In case of leakage or flooding, AquaStop automatically cuts off the water supply while the pump siphons the residual water out of the dishwasher basin. AquaStop remains fully functional for the duration of the working life of the appliance.

Clear water sensor

The water quality sensor monitors water purity until the water is completely free of impurities. This result significantly reduced water consumption when washing lightly soiled dishes while delivering perfect cleaning results every time.

PERFECT LAUNDRY CARE

Gorenje advanced technology ensures the efficiency of the washing process. This is additional assurance that laundry will receive the best possible care in the shortest possible time and with the lowest possible power and water consumption. Washing programmes specially adjusted to particular types of laundry meet the needs of a modern user.

WDI63113

Built-in washer-dryer

\$10,800
